

The background features a complex network of thin grey lines and dots, forming a web-like structure. Scattered throughout are various triangles of different sizes and orientations, some with solid outlines and others with dashed or dotted lines. The overall aesthetic is technical and modern.

NetworkX (Python)

Networks

1. Euroroad

- International E-road network, a road network located mostly in Europe.
- **Undirected**
- **1 174** vertices
- **1 417** edges

2. arXiv astro-ph

- Authors of common papers from the arXiv's Astrophysics section.
- **Undirected**
- **18 771** vertices
- **198 050** edges

3. Livemocha

- Social network of Livemocha, an online language learning community.
- **Undirected**
- **104 103** vertices
- **2 193 083** edges

NetworkX time performance (in secs)

Advantages / Disadvantages

- + Easy access to data -> control over histograms

- + Library -> Process configurability

- + Control over network parameters (size and color of nodes, edges per instance)

- + A wide selection of analysis algorithms (which work slowly on large networks)

- In most cases, slow calculation of network statistics

- A small count of available layouts

- Slow drawing and no control over the process

- No own drawing libraries

The background of the slide features a complex, abstract geometric pattern. It consists of numerous thin, light gray lines that connect various points, creating a network-like structure. Some of these points are highlighted as larger, solid dark gray circles, while others are smaller dots. The overall effect is a modern, tech-inspired aesthetic. The word "THANKS" is centered in the upper half of the slide in a large, bold, dark gray sans-serif font.

THANKS

Does anyone have any questions?
